To Whom It May Concern,

I am a recent graduate of Galvanize's 6 month Web Development Course that trains Full-Stack engineers. The course is broken into 4 quarters. Quarter 1 focuses on Front-End Development teaching us html/css and javascript. Quarter 2 focuses on Back-End Development where I learned both PostgreSQL as well as MongoDB. Quarter 3 focused on Algorithms and Data structures. Quarter 4 I focused on expanding my knowledge of React and Redux.

One of my favorite perks of this industry is the opportunity to continuously learn new technologies and expand on current ones. I enjoy being challenged and working on projects that require me to work outside my comfort and knowledge set, as continuing to learn new languages and development techniques are important to me and the success of your organization.

Your listed requirements closely match my background and skills. A few I would like to highlight that would enable me to contribute to your bottom line are:

• Skilled in UX design.
• Strong understanding of HTML/CSS/Javascript.
• Knowledgeable of front-end development best practices.
• Hands-on software troubleshooting experience.
• Strong focus on React and Redux.

I've included a link to my website: namkai.github.io that details my projects and experience in software development. I can be reached anytime via my cell phone, 415-312-0259 or via email at Namkai.Fairfield@gmail.com.

Thank you for your time and consideration. I look forward to speaking with you about this opportunity.

Sincerely,

Namkai Fairfield
